PREFACE

This, the first edition of the UNION SOURCEBOOK, provides a unique and up to date profile of important aspects of American unionism and previously unpublished data on labor organizations in the United States in the twentieth century.

The purposes of the UNION SOURCEBOOK are several. First, we wish to fill a void created by the termination of the biennial directories of the U.S.Department of Labor, Bureau of Labor Statistics (BLS). The last appeared in September 1980 as BLS Bulletin 2079 and contained figures through 1978. Although a private publisher attempted to continue a directory-like publication, the basic information collected by the BLS was not available.

Even more important, however, is our desire to provide what we believe to be a more current, accurate and comprehensive profile of organized labor, as well as a unique statistical view of union membership over the course of the twentieth century. Our membership figures are derived from financial reports legally required of unions and associations, and provide more consistent, reliable and conceptually appealing figures. Our membership estimates span the years 1897-1983, with preliminary estimates for 1984. In addition, we provide much broader and deeper coverage in most areas. Included is financial information for parent organizations, public versus private sector breakdowns, and state and international comparisons.

The labor organizations included in the SOURCEBOOK are trade unions and employee associations, both those in the public and private sectors of the labor market. By trade union or employee association, we adapted Sidney and Beatrice Webb's definition and mean any continuous labor organization of wage and/ or salaried workers organized for the purpose of maintaining or improving members' material living standards through collective bargaining or collective negotiation. More specifically, our universe includes all active labor organizations ever listed by the BLS in its biennial directories, all organizations designated as parent unions by the U.S. Labor Management Services Administration, and State Public Employee Associations. County and Municipal Public Employee associations and Local Independent Unions are treated as single entities.

The SOURCEBOOK consists of seven sections and an appendix. Section 1 contains an overview, followed by section 2's review of leading events relevant to organized labor in 1982-84. Detailed membership tables are found in section 3 and union finances in 4. Governance and structure of labor organizations are examined in section 5. A directory of 278 labor organizations, with detailed address, officer, membership, structural and historical information for each is in section 6. State and international union statistics follow in section 7.

Appendices with aggregate historical statistics and tables covering all organizations active in 1983 are listed at the end. In these, the membership of each active organization from the start year of its membership to the present is reported. The database underlying the SOURCEBOOK contains the membership of every known organization from the inception of its membership to the year of its termination for any reason.

We intend this to be the first of an annual series of SOURCEBOOKS, and welcome comments, criticisms and suggestions for expansion and improvement.

ACKNOWLEDGEMENTS

We are indebted to a large number of individuals and organizations for their assistance, extending over many years in some cases. Responsibility for the final results rests, of course, solely with the authors.

The late Professor Leo Wolman of Columbia University initiated and supported studies on the membership of unions in this country, and provided the basis of all of our work. Professor John T.Dunlop of Harvard has provided invaluable assistance and support over many years. The comments, advice and assistance of George Bain, Professor of Industrial Relations at the University of Warwick, Coventry, England, have been enormously helpful.

Numerous present and past officials at the U.S. Department of Labor, Bureau of Labor Statistics, have provided invaluable assistance, often extending into their retirements. Mr. Larry Adams, Mr. Leroy Saunders, Mrs. Evelyn Traylor, George Ruben, and many others have made significant contributions.

Important data came from individuals and groups with different and even conflicting views on industrial relations in this country. Dr. Dan Heldman of the National Right to Work Legal Foundation, Mr. Randolph W. Hale of the National Association of Manufacturers and the librarians of the AFL-CIO, Mrs.Dora Kelenson, now retired, Mrs. Evelyn Johnson, currently chief librarian and Mrs. Reggie Cole provided important information that is incorporated into the SOURCEBOOK. The Office of the Secretary-Treasurer, AFL-CIO was helpful in making available copies of financial surveys of affiliated unions. Mr. Robert Pruim of the Assembly of Governmental Employees provided very useful information on affiliates of the AGE. Acknowledgement and thanks are due Dr.Jelle Visser, of the European University Institute and University of Amsterdam, for permission to use his data on unions in post-war Western Europe.

Mr. Bernard Downey, head librarian of the Institute of Management and Labor Relations of Rutgers University, and Marge Watson of the same library are owed special recognition for continuing support, checking and furnishing of data. Likewise, members of the Rutgers' library staff in Newark often provided very helpful services, notably Gil Cohen, Louise Klusek and Susan Sternberg.

To current and former colleagues Jack Cullity, Stan Kaish, Jim Chelius, Monroe Berkowitz, Andrew Seidel, David Appel, Jack Worrall and others, thanks are due for many useful insights and continuous encouragement. We should also like to thank Jim Chelius for a careful reading of the entire SOURCEBOOK and for many helpful comments. Geoffrey Moore kindly carried out the business cycle reference analysis of our membership series at his Center for International Business Cycle Research at Columbia University.

Special thanks go to Bob Gerdes, Eva Marie Kay, Ed Brenckman, and Kathleen Delaney for statistical programming. We also wish to acknowledge the assistance of Carolyn Gerdes and others who labored diligently with the massive task of data entry.

We have been indebted for more years than we care to remember to Dick Storer, Edie Barber, Mildred Evans, Goldie Jadczak, Gert Lewis and many others at Rutgers' Center for Computer and Information Services for invaluable assistance of all kinds. Also, to Marilyn Johnson, Dorothy Rinaldi, Laura Ford, Laurie McGinnis and other Economics' staff members, thanks are due for extremely helpful assistance over the years. Al Hanna, Helen Gertler, David Cayer, Fred Hain, and Nat Pallone, all at Rutgers, have provided assistance and support.

The Rutgers University Research Council and the National Science Foundation have in the past, provided research support for related studies.

Publication of the SOURCEBOOK would not have been possible without the interest of Arthur Prine,Jr. of R.R.Donnelley and Son, Company. Mr.Jeffrey Riback of the New York office and other members of the staff, notably Kenneth Sneider and Harry Moehring, contributed significantly to the production of the book. Likewise, to George S. Matts for important support services. We should also like to acknowledge the assistance of Marvin Sunshine, Esq..

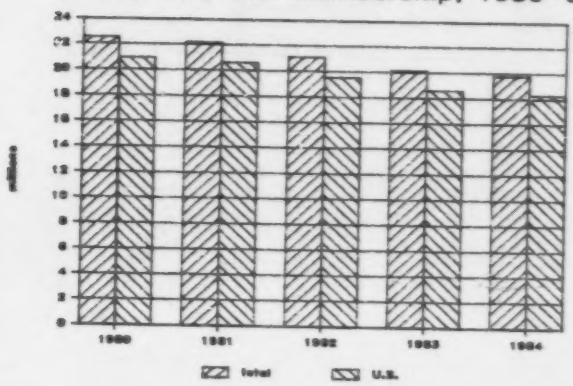
CHARTS

1. Union Structure - 1983.....5-2

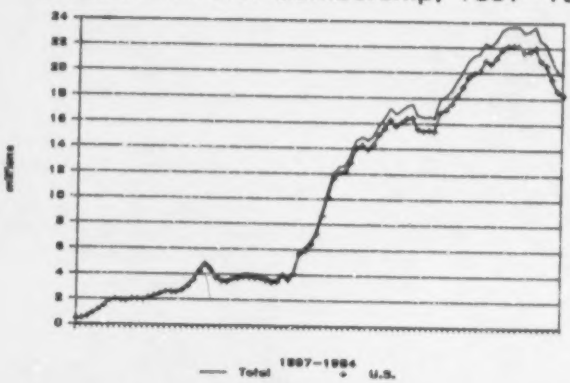
1 HIGHLIGHTS

The steady decline in U.S. union and association membership which began in 1975, continued in 1983 and 84. (see figure 1). Total membership of American unions in 1984 dropped to 19.8 million, following declines of 946 thousand (4.5%) in 1983 and 355 thousand (1.8%) in 1984. U.S. membership (excluding Canadian members of U.S. unions) in 1984, fell to 18.3 million. The 9 year, 16 % decline in total membership from the cyclical and historical peak in 1975, represents the most sustained, significant decline suffered by U.S. unions in the twentieth century (see figure 2). Total membership has been reduced to the levels of 1965-66 and preliminary estimates for 1985 suggest a continuation of this trend.

1 Total and U.S. Membership, 1980–84

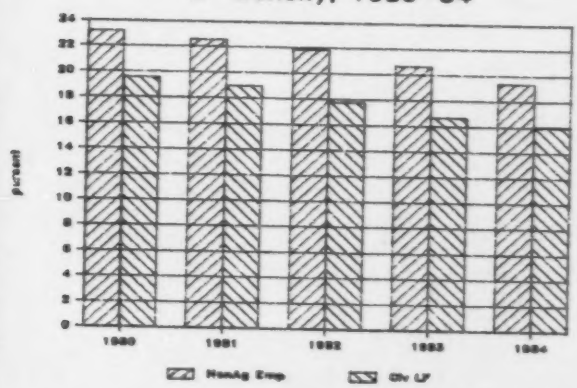


2 Total and U.S. Membership, 1897–1984

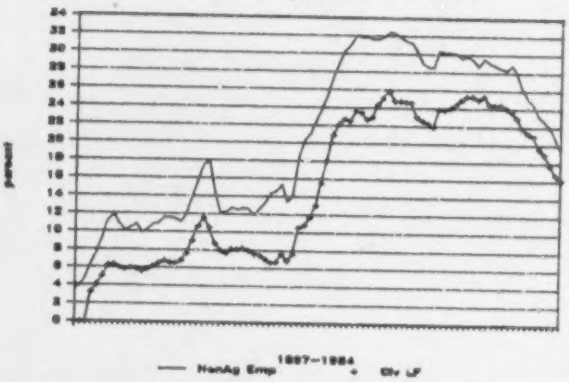


Union density or penetration (the percentage of the U.S. labor market organized by U.S. members), declined from a 1953 peak of almost 26% of the civilian labor force to 16.6% in 1983 and 16.1% in 1984 (see figures 3 and 4). As measured by non-agricultural employment, density fell from its 1953 peak of almost one-third of such employment, to 20.7% in 1983 and 19.4% in 1984, bringing this density measure back to the levels of 1936-37. These losses continue organized labor's 30 year decline in labor market penetration and current indications are that this trend will continue in 1985.

3 Density, 1980–84

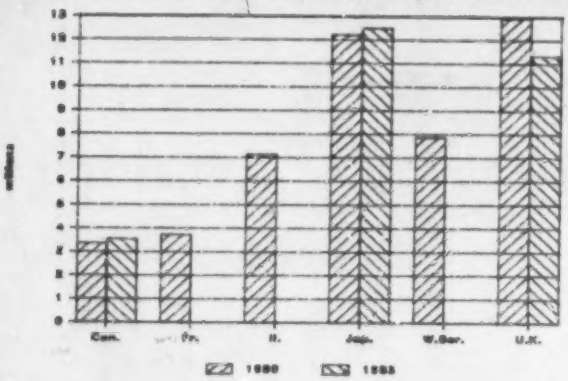


4 Density, 1897–1984

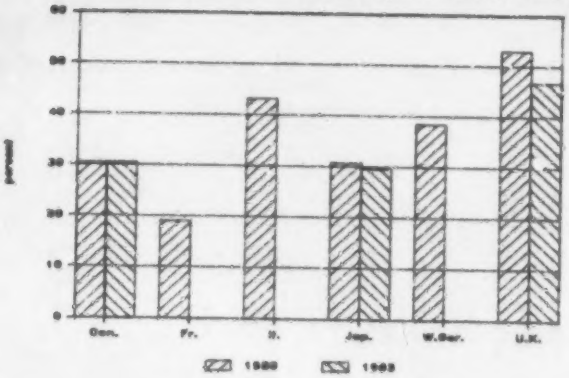


The decline in the membership of American unions is paralleled in other major industrial nations, with the exception of Japan and Canada (see figure 5). In West Germany, the United Kingdom, France and Italy union membership has apparently continued to decline in the 1980's from peaks reached in the 1970's. In the case of the U.K., by 1983, membership had declined by almost 15% from the 1979 peak, slightly less than the 17% decline in U.S. membership in the same period. Japan's membership trend was essentially flat, with a very mild decline during 1975-79 followed by a gradual rise to slightly above the 1975 level by 1983. Canadian membership has grown about 5% since 1980, 23% since 1975.

5 International Membership, 1980,1983



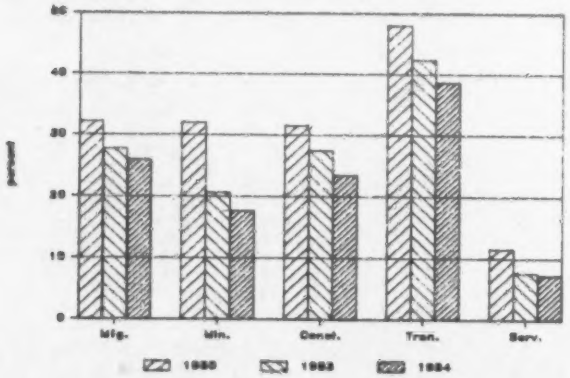
6 International Density, 1980,1983



Union penetration of the labor market has declined in these industrial nations, including Canada and Japan (see figure 6). Indeed, in Japan, despite a rise in total membership in 1983, density dropped below 30 percent of employment for the first time since the end of World War II. Like the U.S., Japanese unions' rate of penetration of the total labor market peaked in the 1950's and has slipped steadily since. In the United Kingdom the record high rate of labor market organization was registered in 1979 at 54.6% of the labor force and has fallen in each of the succeeding four years. Similarly, union density has dropped below peak rates of the seventies in West Germany, France and Italy. In Canada, density has been relatively unchanged since the mid 1970's.

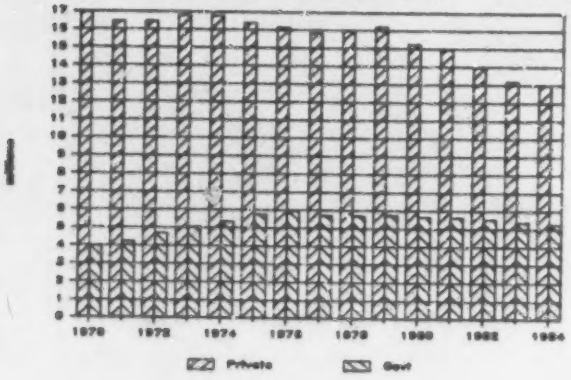
The decline in U.S. density has been widespread throughout industry (see figure 7). Manufacturing density has plummeted to 26% from 32% in 1980 and from more than 42% in the peak year of 1953. Mining, construction, and transportation have seen their penetration decline to less than half of their peak rates and even the rapidly growing service sector has suffered significant declines.

7 Density by Industry, 1980,83,84

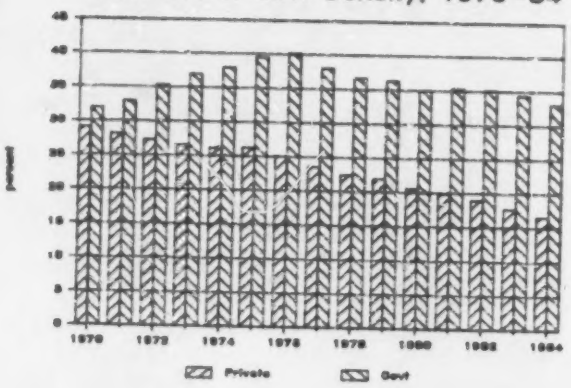


Unions' decline in the U.S. affected the public as well as the private sector of the labor market. Total membership in the private sector reached just over 13 million in 1984, down from its 1970 peak of 17 million. Public sector membership began to decline in 1976, when it was at its peak level of just under 6 million, and has fallen to 5.3 million in 1984 (see figure 8). Density peaked in the private sector in 1953 with nearly 36% of non-agricultural employment unionized; in the public sector the peak came in 1976, the same year in which membership peaked, and the penetration rate was 40.2% see figure 9). Because private sector membership has fallen more rapidly than public sector membership since the seventies, the share of total membership in public sector unions has risen to nearly 30%.

8 Private & Govt Membership, 1970–84

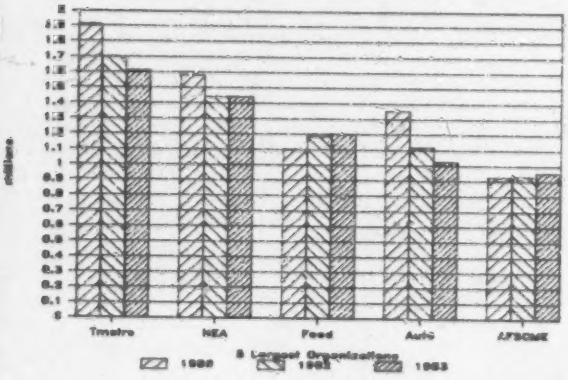


9 Private & Govt Density, 1970–84

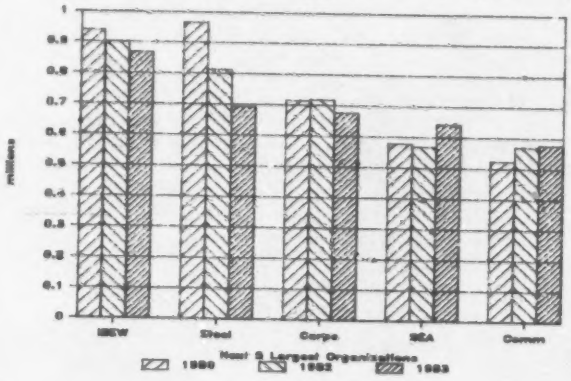


The decline in union ranks has spread over nearly every major labor organization (see figures 10,11). The Teamsters, the National Education Association, the Auto Workers, the Steelworkers, the International Brotherhood of Electrical Workers (IBEW),the Carpenters, and the Machinists, to list the most notable, all lost membership since 1980, and each is well below its individual peak year membership. Among the few gainers were the Food and Commercial Workers, the American Federation of State, County and Municipal Employees and the Service Employees. However, the growth of the latter two may be attributable more to acquisition (by merger) of existing labor organizations than organizing the unorganized.

10. Largest Orgs, 1980,82,83

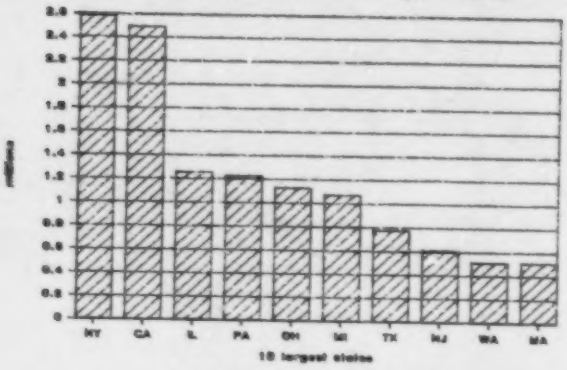


11. Largest Orgs, 1980,82,83

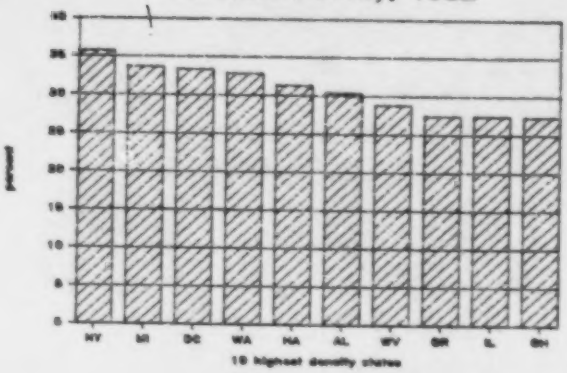


Among the states, New York (as of 1982) has the largest union membership and is the most organized in the country (see figures 12 and 13). California ranked second in the number of members and Michigan second in percentage organized. Smallest in membership is Vermont and lowest in the percentage organized is South Carolina. Pennsylvania ranks first and Alaska last in the number of labor organizations.

12 State Membership, 1982



13 State Density, 1982



Total net assets of organized labor as a whole in the U.S. reached a record $5.7 billion. Among individual unions, the Auto Workers owned over $606 million in net assets, the IBEW over $407 million, the Steelworkers over $215 million, the Teamsters more than $155 million, the Machinists just under $150 million, the Carpenters nearly $144 million, and the International Ladies Garment Workers almost $124 million. (The financial figures on the unions identified exclude the assets owned by their subordinate organizations and exclude collectively bargained benefit funds). The 191 parent organizations for whom 1982 financial reports were available, had total income of $2.2 billion, with net income of $324 million. Their total assets were more than $3.1 billion with net assets of $2.9 billion.

The highest paid union officer is the president of the Air Line Pilots with a salary of nearly $250 thousand. Numerous organizations pay their principal officer $100 thousand or more annually in salary. Among these are the AFL-CIO, the Building and Construction Trades Department of the AFL-CIO (whose salary exceeds that of the president of Federation itself), the Carpenters, the IBEW the Food and Commercial Workers, the Operating Engineers, the Hotel, Restaurant and Bartenders union, the Laborers, the International Longshoremens Association, the Marine Engineers (nearly $200 thousand), the Masters, Mates and Pilots, the NHU, the Painters, the Railway Clerks, AFSCME, the Teachers, the Directors Guild and the Teamsters, In a number of instances, officers or employees of the union have salaries greater than the presidents'. Among major unions paying their president less than $100 thousand are the Auto Workers, the Machinists, the National Education Association the Service Employees and the Steelworkers.

2 LEADING EVENTS IN ORGANIZED LABOR

THE LABOR MARKET

In November 1982 the economy began recovering from the recession which had begun 16 months earlier, in July 1981. The unemployment rate which reached a 42 year peak of 10.7 percent in November 1982, fell steadily to 7.2 percent by the end of 1984. The total number of civilian unemployed dropped from 11.9 million in November 1982 to 8.2 million in December 1984. [1]

Total civilian employment rose sharply from the recession low to the end of 1984, increasing from 99.1 million in November 1982 to 106.3 million by December 1984. In non-farm industries, the recovery added approximately 2 1/2 times the number of peyroll jobs lost during the 1981-82 recession. However, "[v]irtually all of that recession loss occurred in the goods producing sector, while two-thirds of the recovery gains took place in the service-producing sector." [2] Despite the employment gains in the economic recovery, union membership declined in each year between 1981 and 1984. Historically, union membership has been concentrated in goods industries and has been weak in the services. Consequently, the recession hit unions particularly hard in durable goods manufacturing while the recovery did little to restore their membership. Census data show that employment in these industries fell about 500 thousand between 1980 and 1984, but that the number of employed union members shrunk nearly twice as much, by one million. In non-durables, union membership also declined more than did employment in this period, decreasing by 400 thousand compared to a job loss of 300 thousand. [3]

In automobile manufacturing, economic improvement and quotas on Japanese imports boosted domestic production and employment, but not to pre-slump levels. Indeed, the prospect of permanent job loss looms for many auto workers with derivative reductions in employment and membership in associated industries. Low operating rates in steel, shipbuilding and copper attributed, in part, to foreign governmental subsidies, reduced employment and union membership in these industries. Union strength in meatpacking was also sharply reduced with the decline and demise of unionized firms and the rise of unorganized companies. Meanwhile, deregulation increased competition and cut both work forces and union membership in airlines and trucking.

Industries experiencing growth, those in defense and high technology, did not generate either large increases in employment or in the occupations which are characteristically union. Firms producing military goods are often capital intensive and therefore generate commensurately less employment when they expand. High-tech firms employ large numbers of professional and technical workers and these remain predominately non-union.

AT&T'S divestiture will continue to pose challenges for all labor organizations in the former Bell system, particularly the Communications Workers of America, the largest union in telecommunications, as the industry and the unions deal with the transition from a monopolized to a competitive climate.

Employment growth has tapered off in government, a sector in which employment and unions made spectacular gains in the 1960's and 1970's. Between 1980 and 1984, employment declined from 16.3 to 15.9 million. Membership in the public sector peaked in 1976 at just under 6 million and has since edged slowly downward.

In the face of these problems, union members and union leaders were reported by Labor Day 1984 as feeling that the balance of power had shifted to employers. The Secretary-Treasurer of the AFL-CIO characterized the situation as being in a "hiatus" that "[a]ll we can do is hold on until we win the elections. If we lose the elections we have a lot of thinking to do."[4]

LABOR AND THE LAW

Of growing concern to unions in 1984 was some firms' resort to protection under the Bankruptcy Code which enabled them to invalidate their collective bargaining agreements prior to insolvency. Legislation enacted in 1978 encouraged companies to seek shelter from creditors while still solvent in order to preserve jobs. In addition, management was permitted by that legislation to remain in control during reorganization; hitherto, management was replaced by a court appointed trustee.

In labor relations, these changes culminated in the Bildisco case of Feb.22,1984.(104 Sup.Ct.Reptr.1188). That decision upheld the legality of managements' right to void a collective bargaining agreement when under financial duress, but not insolvent. Furthermore, the decision gave the Bankruptcy Code precedence over the National Labor Relations Act. However, shortly afterward, in June 1984, Congress and the President modified the Court's decision when they agreed to legislation revamping the Bankruptcy Courts.

At the National Labor Relations Board, the new Board reversed a number of decisions by its predecessors, and in some instances reinstituted earlier policy. Among key changes were the rules on union solicitation during working hours in Our Way.; the meaning of concerted activity in Meyers; limiting Board reconsideration of arbitrated issues in Olin; and under Illinois Coil Spring reversal of previous doctrine on managerial requirements to negotiate plant relocation.

Our Way (268 NLRB No.61,1983) reversed TRW Bearings Div. (257 NLRB 442,1981) and reinstated Essex International (211 NLRB 749, 1974). Now, employer rules prohibiting solicitation on behalf of a union during actual working time are valid, but do not extend to employer rules prohibiting solicitation on employees' own time during the working day. Furthermore, an employer's rule against solicitation during a union election

campaign is not automatically invalid, provided the employer acted for legitimate business reasons (Brigadier Industries, 271 NLRB, No. 104,1984).

Employer interrogation of open union supporters is lawful if it is noncoercive under Rossmore House,(269 NLRB No.198,1984). This decision overturned PPG Industries(251 NLRB 1145,1980) and reinstated a thirty year old rule (Blue Flash Express 109 NLRB 591, 1954) which rejects a per se rule and now requires a determination "whether under all of the circumstances the interrogation reasonably tends to restrain, coerce, or interfere with rights guaranteed by the Act."

Under United Technologies (274 NLRB No. 87,1985) the Board ruled that an employer may communicate directly with employees during bargaining so long as the action does not constitute direct dealings or an attempt to bypass the union. In this case, the employer distributed leaflets and mailed letters to employees publicizing management's latest contract offer and urged union members to pressure union negotiators to present the offer to the membership and to consider management's offer favorably.

Meyers Industries 268 NLRB No. 73,1984 reversed Alleluia Cushion (221 NLRB 999,1975) and the theory of "constructive concerted activity". In Meyers, the Board ruled that the discharge of a truckdriver for refusing to drive an unsafe truck, while outrageous conduct on the part of the employer, was not violative because the employee's refusal did not constitute concerted activity under Section 7 of the Act.

On appeal, the Circuit Court for the District of Columbia, in a two to one decision, remanded the case to the Board on the grounds that the Board's narrowed definition was not mandated by the Act nor did the Board's decision return to the pre-Alleluia situation,but went beyond it.

In another case of major importance, the NLRB reversed a 1982 holding and permitted the Milwaukee Spring Division of the Illinois Coil Spring Company to relocate work from a unionized plant to a non-union plant during the term of a contract in order to obtain relief from the contract's labor costs. The Board relied in this case on the absence of a contract provision controlling work preservation and bargaining in good faith to an impasse on the employer's decision to relocate. (Milwaukee Spring II 268 NLRB No.87,1984).

In a related case, Otis Elevator, a subsidiary of United Technologies, (269NLRB No. 162,1984),the Board ruled that an employer decision to change its operations may not be a mandatory subject of bargaining. If, as in this case, management changes the basic direction or nature of the enterprise, there is no requirement that it must negotiate the change with the union.

The NLRB expanded its policy of deferring to arbitration of labor disputes in United Technologies (269 NLRB No. 83,1984) and Olin (268 NLRB No 86,1984). In United Technologies, the Board ruled that it may direct the parties to the grievance/arbitration procedures under their contract rather than process charges of certain unfair labor practices filed by either labor organizations or employers. Under Olin, the Board will defer to the arbitration of alleged unfair labor practices if the arbitrator has considered the unfair labor practice and the arbitration was fair and regular and not in conflict with the National Labor Relations Act. This decision modified Spielberg (112 NLRB 1080,1955).

Elections won by unions in representation elections continued to slide downhill in 1983 and 1984. Prior to 1974, unions won more than one-half in any year; since then, they never have. In 1982 they won 44 % of representation elections. Moreover, even after winning an election, unions frequently failed to obtain a contract. AFL-CIO studies reveal that five years after winning an election, as many as one-third failed to result in an agreement. Unions have been losing decertification elections in three out of four cases in recent times and their number is growing.

The total number of unfair labor practice and representation cases filed with the NLRB declined in fiscal 1984, dropping 11.1% below 1983 and 8.0 % below 1982. Case intake was the lowest since 1974.

Idaho became the 21st state to enact a right-to-work law, legislation banning contractual agreements requiring membership in a union as a condition of employment, but a state court order has postponed implementation of the law pending a state referendum in November 1985.

COLLECTIVE BARGAINING

The U.S. Bureau of Labor Statistics reported that in 1984 the size of wage adjustments touched historic lows. Wage increases under 1984 settlements averaged 2.4% for the first year and annually over the life of the agreement.The increases were the smallest since the Bureau began its series in 1968.[6]

Major collective bargaining agreements in 1984 reflected the parties concerns with the effects on costs and job security of international competition and deregulation. Another important factor limiting wage gains was the continuation of a moderate rate of inflation.

In addition to smaller wage adjustments, some agreements reduced labor costs by providing lump-sum payments in lieu of wage increases. This method of paying additional compensation to employees reduces employers' costs in several ways. Typically, the payments are made at the end of the contract period rather than in regular paychecks; they do not affect basic scales and so do not affect benefits tied to the base rates.[7]

For 1985, the bargaining calendar in private industry is light after 3 years of heavy bargaining. Negotiations affecting about 1/3 of the 7.4 million workers under major agreements will take place. The industries affected include trucking, rubber, construction, and apparel. In the public sector, first time data show that 55 percent of state and local government employees are slated for new agreements in 1985.[8]

3 MEMBERSHIP

3.1 INTRODUCTION

The total membership of American unions, including Canadian members, declined from 20.2 million in 1983 to 19.8 million in 1984. ("Total membership" refers to all members of U.S. unions includes Canadian members of these organizations, while "U.S. membership" refers to membership solely in the U.S.). Excluding Canadian members, there was a decline from 18,634,000 in 1983 to 18,306,000 in 1984 (table 3.31)

Coupled with a growing civilian labor force and non-farm employment, the decline in union membership in the U.S. reduced union density, that is, the percentage of the civilian labor force or, alternatively, non-farm employment, organized. Relative to the civilian labor force, density fell from 16.6% in 1983 to 16.1% in 1984; relative to non-farm employment, the percentage organized declined from 20.7% in 1983 to 19.4% in 1984 (table 3.31).

Measured from the historic peak in 1975 of 23.7 million members (U.S. membership reached 22.2 million) the decline by 1984 was very steep (see table 3.41). Membership in the U.S. fell by 3.9 million, almost 18 per cent (Table 3.32) over this nine year period.

Union density reached its historic highs in 1953 at one-third of non-farm employment and one-fourth of the civilian labor force. By 1984, unions' penetration of non-farm employment had shrunk to under one-fifth and to 16 per cent of the labor force (table 3.41).

The loss of membership was widespread, affecting affiliates of the AFL-CIO, Independent unions, unions in the private and public sectors, and associations as well as unions. Few large organizations (membership in excess of 100 thousand) avoided the decline (Tables 3.33 and 3.72). The sharpest losses were taken by the Railway and Airline Clerks, the Machinists, the Steelworkers, the Nurses Association, and the Auto Workers. The Teamsters, the largest union in America, also lost members, while the second largest organization, the National Education Association, remained virtually unchanged in membership. Among the gainers were the Service Employees, Boilermakers, the Transit Union, the American Federation of Government Employees (AFGE), the State, County and Municipal Employees, the Food and Commercial Workers, the Communications Workers, and the Firefighters. However, the gains were small and in the case of the Service Employees and some others, the growth reflected absorption of existing labor organizations in the public sector and therefore did not add new members to organized labor. Only a few organizations were at their peak membership in 1983, including the Food and Commercial Workers, the American Federation of State, County and Municipal Employees, the Service Employees, the Communications Workers, the Firefighters, and the Fraternal Order of Police.

The (total) membership of unions with 100 thousand members or more for selected years since the end of World War II is shown in Table 3.71. The Teamsters have always headed the list as the largest union.

The two unions with the largest percentage decline in membership were both in the printing industry, the International Typographical Union (the oldest national organization) and the Graphic Arts Union (see tables 3.33, 3.34, 3.72). The Service Employees led in growth rates. Total membership, average annual membership growth and growth rates are shown in Tables 3.51 and 3.52; for the public sector, growth rates from 1897-1984 are reported in Table 3.94.

Examining the size distribution of organized labor, nearly one-half of all labor organizations (48.1%) in 1983 had 5 thousand or fewer members (Tables 3.37, 3.81). On the other hand, 11 unions, 3.9 % of the total, accounted for over one-half of union membership. Thus far into the 1980's, the proportion of membership among organizations with over one-half million members exceeds that of the 1970's and earlier periods.

Concentration of membership, measured by the share accounted for by the largest 1,3,5 or 10 organizations, which has been increasing historically (Table 3.82), continued to gain between 1982 and 1983 (Table 3.38).

A decennial overview since 1910 of the number of active organizations, starts, terminations and mergers and the associated total membership is reported in Table 3.83. The greatest number of active organizations (annual average), 302, and membership, 23,707,000, since the beginning of the century flourished during the decade ending 1980. New starts and the associated membership were largest during the decade ending in 1970, reflecting the surge of public sector unionism during that ten year period (as well, as noted below, as the classification system used in the SOURCEBOOK). Terminations were most numerous during the decade from 1910 to 1920, apparently reflecting the demise of many organizations founded during the period of the First World War and its immediate aftermath when union growth was very rapid. Merger activity was greatest during the ten years ending in 1980 as a result of consolidation efforts by unions in the face of often rapid and steep declines. The number of members involved was also a record. For the twenty years between 1960 and 1980, the number of mergers exceeded all previous union history.

Union density is currently well below historic peaks and, in fact, has dropped to rates comparable to those of the 1930's (tables 3.41 and 3.63). In mining and construction, historically centers of union strength, union penetration rates in 1984 are below those of 1930. The current level in transportation is about the rate unions attained between 1935 and 1939. Manufacturing, which did not become extensively unionized until the late 'thirties, is now below the 1940 level and well under its peak of 1953. The peak of union penetration of the labor market as a whole measured relative to both the civilian labor force and non-agricultural employment reached its peak in 1953.

Membership movements in the twentieth century have been generally pro-cyclical, roughly coinciding with the reference cyclical at peaks and lagging somewhat at troughs (table 3.55). Of the 19 reference cycles since the turn of the century, the membership series failed to exhibit corresponding cycles in 9 and had two that were not reflected in aggregate economic activity. Membership expansions have averaged 4.5 years while contractions averaged 2.5 years. However, whereas expansions and contractions where of roughly equal length before World War II, since the war, expansions have lasted more than 2.5 times longer than contractions.

Totals by affiliation since 1897 are listed in Table 3.61. These show figures for the American Federation of Labor, Independent unions, the Congress of Industrial Organizations, the AFL-CIO, Assembly of Governmental Employees and the American Association of Classified School Employees. As a matter of historical interest it is now clear that the AFL always exceeded the membership of the CIO, although in the late 'thirties and early 'forties there was some speculation that the reverse was the case.

Private sector membership peaked in 1970 at 17 million and has subsequently declined sharply, to 13 million in 1984 (tables 3.31, 3.62, 3.91). Previously unknown, however, is that public sector membership has also suffered declines since its peak of 6 million in 1976, to 5.3 million in 1984. Currently public sector membership comprises about 30 per cent of total membership. At the same time the percentage of the labor market organized by public sector unions is about double that of the private sector, (table 3.91). The peak of public sector density was in 1976 at 40.2%; since then it has declined steadily, to 33.1% in 1984. Meanwhile, private sector density, currently under 17% continues its long run slide from its peak of 35.7% reached in 1953.

A breakdown of public sector membership between federal and state governments, proportions in the two governmental sectors and the percentage of employment organized in each from 1897 are recorded in Table 3.92. Of the two governmental sectors, the state and local has grown most rapidly since the 'sixties; again the share data are affected by the inclusion of the NEA as a "union" in 1962.

Federal employment is more organized than state and local government, as shown in Table 3.92. The percentage organized among federal employees peaked at 43.3% in 1972 and edged downward to 37.1% as of 1983. Likewise, union density at the state and local level has declined from its peak of 39.9% in 1976 to 32.7% in 1983.

A breakdown showing postal service membership, share of public union membership and extent of organization is shown in Table 3.93. The postal service is the most unionized "industry" in the labor market. The peak rate of unionization came in 1976 at 95.5% and then dropped to 87% by 1983.

Table 3.93 also includes a breakdown of union membership in education. Most of it is in the public sector. Problems of distinguishing between the public and private educational sectors and obtaining a comprehensive series of employment data for both sectors forestalled computations of density.

3.2 METHODS AND COVERAGE

The membership figures in the SOURCEBOOK represent the average annual, dues-paying, full-time equivalent membership of every known private and public-sector labor organization in existence during the period from 1897-1983, with partial and preliminary coverage for 1984. The figures are largely derived from financial information on individual unions and associations, and have been adjusted to a calendar year basis. For a small number of organizations, it has been necessary to use union-supplied membership figures (comprising less than 8% of total membership), and for others extrapolations (representing less than 6% of total membership).

The SOURCEBOOK's coverage includes all organizations required to file annual financial reports under the Labor Management Reporting and Disclosure Act of 1959 (LMRDA) as well as other organizations as noted below. Under LMRDA as supplemented by Executive Order 11491 of 1970, Section 7120 of the Civil Service Reform Act of 1978, and the Postal Reorganization Act of 1970, essentially all multi-state unions, as well as unions representing federal employees and Postal unions file such reports. Unions of state, county and municipal employees, are included in the SOURCEBOOK's coverage, although they do not file under LMRDA. Also included are some other organizations who appeared in past issues of the Bureau of Labor Statistics' (BLS) Directory of National Unions and Employee Associations (see BLS (1980) and BNA (1982)). Additional unions and associations, many now defunct, have found their way into the SOURCEBOOK's historical coverage, through their inclusion in Wolman and Troy's earlier works.

As noted, most of the membership figures for 1962-1983 have been derived from financial reports filed under LMRDA. The approach, in essence, uses the annual 'per-capita' revenues received by the parent regional, national or international organization from local unions, and divides these by the organizations per-capita rate, to yield the average annual, full-time equivalent dues-paying membership. For unions which have a multiple dues structure, uniform per capita allocations made to special funds from their own financial reports were used. This method is important in computing the membership of such unions as the Auto Workers, the Carpenters, the International Brotherhood of Electrical Workers, the International Association of Bridge, Structural and Ornamental Iron Workers, and the Machinists. For those unions in which the dues rate is dependent upon a percentage of earnings, such as the Steelworkers, a number of secondary sources have been used to obtain an average annual dues or per capita rate. For the relatively small percentage of organizations

not required to file under LMRDA, most importantly state organizations, a variety of other sources were used, including the organizations' own published membership figures.

Also included in the SOURCEBOOK are estimates of total municipal employee union membership and the total public sector membership of predominantly private sector organizations, both beginning in 1962. The former was derived by extending the percentage that such organizations represented of total union membership for a single year (obtained from a BLS survey of such organizations) to the years 1962-82. The latter was developed by cumulating public sector components of private sector organizations (obtained from an unpublished 1978 BLS survey) determining the percentage such organizations represented of our total membership figure, and applying this figure to annual membership figures for 1962-83. Combined, these represent less than 1 million members. Organizations were classified as in the public sector either by LMSA, BLS, or identified by us as such through other means, including examination of constitutions.

The resulting membership figures reflected varying fiscal years and were adjusted to a calendar year basis using a simple weighted average of the current and next-years membership, with the percentage of the current calendar year included in the fiscal year, used as the weight.

Canadian membership figures are from the directories of labor organizations in Canada published by Labour Canada.

The membership figures for 1935-1961 were derived from Troy's (1965) work after revision, extension of coverage, and conversion to a calendar year basis as described above. The figures for 1897-1934 are those of Wolman (1936) reconstructed on a calendar year basis. This was done by using a simple weighted average for members of the AFL using .667 and .333 as weights for the current and one-year ahead figures, reflecting the AFL'S August fiscal year closing date during this period.

Although there are a variety of ways to define union/employee association membership, the dues-paying concept employed in the SOURCEBOOK has a number of significant advantages. The use of standardized, legally required financial reports provides a consistent, objective basis for membership determination, free of reporting and interpretation problems. Furthermore, dues-based membership, which exclude virtually all unemployed members, provides more accurate comparisons with employment in gauging union penetration of the labor market. On the other hand, since the civilian labor force includes the unemployed figures on the percentage of the labor force organized are biased slightly downward. Unions and employee associations use this approach in determining representation and voting power of subordinate organizations at regular conventions. For example, the AFL-CIO's Constitution, November 1979, Article IV, Section 8 states," The number of members each national and international union, organizing committee and directly affiliated local union for the purpose of selecting delegates and roll-call votes at the convention shall be the average monthly number on which per capita tax is paid." Similarly, the International Ladies Garment Workers' Constitution, October 1980, Article 2, Section 7 declares, "To be entitled to send delegates to a convention, a subordinate organization must have paid all its per capita taxes ... owing to the I.L.G.W.U."

There is a discontinuity in coverage between the pre and post 1962 data, due to the treatment of public sector organizations. It is in 1962, the year in which Executive Order 10988 signalled the beginning of the rapid growth in federal employee unionism, that we began to include many associations in our universe. The BLS in its biennial Directory's, on the other hand, did not begin counting associations until 1968. Thus, some of the large jump in public sector membership seen in 1962 represents expanded coverage. For example, the National Education Association enters our universe in this year. Historically, the NEA viewed itself as a professional association. However, in the early 'sixties it was challenged for representation rights by the American Federation of Teachers, AFL-CIO, in important jurisdictions like New York City (and lost to the Teachers), and in responding to the challenge, the NEA increasingly became a labor organization, engaged in collective bargaining. In addition to competing for representation rights and engaging in collective bargaining, the NEA abandoned its opposition to the strike. However, it was not until the 1970's that the NEA began to file required reports with the U.S. Department of Labor.

Recent figures from the U.S. Bureau of Labor Statistics, developed by the U.S.Bureau of the Census from the CPS, provide the only alternative estimates of U.S. union membership (these figures are not consistent with the Bureau's earlier Directory series). The BLS reported U.S. membership of 17.7 million in 1983 dropping to 17.3 million in 1984, as compared to 18.6 and 18.3 million for the SOURCEBOOK in 1983 and 1984 respectively. Thus while BLS agreed with the SOURCEBOOK in showing a decline between 1983 and 1984, they indicate somewhat over 5% fewer members than shown in the SOURCEBOOK.

These divergences in reported membership result from differences in concept, method, scope and reference periods, between BLS and the SOURCEBOOK. The Census' data are derived from survey's of wage and salaried workers, whereas the SOURCEBOOK originates with the labor organization; Census data refer to the sole or principal job of full and part-time workers, but exclude self-employed; on the other hand, the SOURCEBOOK results are annual average full-time equated membership, include self-employed union members and include some dual members such as in the performing arts; (dual membership is very small, however); Census results are from a sample survey of households, while ours are the sum of all known labor organizations; the Census data are averages for years ending September, while ours are for the calendar year, and in the case of 1984 are preliminary. The Census and the SOURCEBOOK both include employee associations and unions. In the public sector, BLS agrees with the 83-84 decline showed by the SOURCEBOOK while revealing a somewhat higher level of membership (approximately 7% higher).

NOTES FOR MEMBERSHIP TABLES

GENERAL NOTES Figures for 1984 are preliminary; they are based on financial reports available through December 1983. While the SOURCEBOOK's database shows 280 active organizations through 1983, 2 of these are offsetting public/private sector constructs, and 2 are aggregates for independent local unions and independent municipal employee asscoiations. The sum of the individual items may not equal the totals because of rounding.

TABLE 3.31 Total membership includes International and National Unions and Employee Associations headquartered in the U.S.; State, County and Municipal Public Employee Associations and Local Independent Unions. U.S. membership also includes membership in Puerto Rico, the Canal Zone and Guam. Canadian membership figures are from the directories of labour organizations in Canada published by Labour Canada. U.S. labor force and non agricultural employment are from annual reports of the the Council of Economic Advisers and U.S. Bureau of Labor Statistics. AACSE is the American Association of Classified School Employees. AGE is the Assembly of Governmental Employees. Our universe includes all active labor organizations ever listed by the BLS in its biennial directories, all organizaions designated as parent unions by the U.S. Labor Management Services Administration, and State Public Employee Associations. County and Municipal Public Employee associations and Local Independent Unions are treated as single entities.

TABLE 3.33 Changes in membership and simple percentages are for total membership (U.S. and Canada).

TABLE 3.34 Percentage changes are simple, annual growth rates in total membership (U.S. and Canada).

TABLE 3.36 See "Sources and Methods" for details.

TABLE 3.37 Excludes county and municipal employee associations.

TABLE 3.38 Calculations use total membership (U.S. and Canada).

TABLE 3.41 Non-agricultural employment and civilian labor force are from annual reports of the Council of Economic Advisers and the U.S.Bureau of Labor Statistics.

TABLE 3.55 Identification of peaks and troughs in union membership calculated by Geoffrey Moore and the Center for International Business Cycle Center, Columbia University.

TABLE 3.63 Total non-farm and government, 1930-1984, Union Sourcebook; all other industries, 1930, 1935, 1940 and 1947 from Leo Troy, Unpublished Tables; 1939 and 1953, from Leo Troy, Distribution of Union Membership Among the States, 1939 and 1953, (New York: Nat. Bur. of Econ. Res., 1957) Occ. Paper 56, Table 6, p.24. For the years 1930-1953, Services also include Trade, Finance Insurance and Real Estate. From 1966 to 1984, all figures, except for total non-farm and government are from surveys made by the U.S.Bureau of Census for the U.S.Bureau of Labor Statistics.

TABLE 3.71 Figures are the total membership (U.S. and Canada).

TABLE 3.72 Calculations use total membership (U.S. and Canada). Independent local unions treated as a single entity.

4 FINANCE

4.1 INTRODUCTION

Major financial items for 1982 of nearly 200 national and international unions and associations, listed alphabetically, are presented in Table 4.1. A combined report of these organizations follows in Table 4.2 together with a comparison for 1980, when there were more active parent unions. Detailed financial reports of the 50 largest parent organizations, including the AFL-CIO itself, follow in Table 4.3. It should be noted that due to the need for extensive editing of the raw financial reports filed by unions, the financial information in this section deals only with parent organizations. Section 7 provides limited financial information for all levels of unionization.

Net income of these unions rose between 1980 and 1982, even though membership declined. In 1982, the combined net income of 191 parent organizations totaled $324 thousand, a gain of almost $155 thousand over 1980. (Because of rounding in data processing, detail may not add or subtract exactly). Of total "operating income" more than 2/3 came from members in 1982 and nearly 3/4 in 1980.

The largest expense items are salaries and benefits paid officers and employees in both years. However,the amount and share fell between 1980 and 1982, perhaps reflecting the large number of mergers and very likely a reduced number of officers and employees. In the "Directory" section, salaries and expenses of the two leading officers are reported.

Total assets of parent unions also increased since 1980, from $2.5 to to $3.1 billion. Hence, even in the face of declining membership, the wealth of these parent organizations has increased. In our tables on state membership, Table 7.10, the total assets of all unions was calculated to be $6.3 billion.

Net assets of parent unions rose as well, from $2.3 to $2.9 billion, while their current ratio increased from 15.1 to 15.5.

4.2 SOURCES AND METHODS

The source of the financial data are the reports unions file with the U.S.Department of Labor, Labor Management Services Administration as required by the Labor Management Reporting and Disclosure Act of 1959. The coverage embraces all unions in the private sector at all levels of the union structure, but does not include a portion of the associations and unions in the public sector. However, all public sector national unions do report; exempted are a substantial number of local and district affiliates and local independent county and municipal associations.

The financial tables reported in the SOURCEBOOK except the table on the state breakdown (section 7), apply only to national and international unions. Future editions of the SOURCEBOOK will include parallel financial tables on local and intermediate unions.

The funds reported derive from payments made per member from affiliated local and intermediate unions to the parent national or international union, property income from assets owned by the parent union and miscellaneous sources. Excluded are collectively bargained pension and benefit funds, while those financed by members under provisions of a union's constitution are included. The leading example of a member self-financed pension and benefit fund is that of the International Brotherhood of Electrical Workers. Financial reports for the fifty largest are shown in the SOURCEBOOK with consolidated values for just under 200 national and international organizations.

5 STRUCTURE

The structure of organized labor in the United States consists of four basic units, the local union, the intermediate or district organization, the regional, national and international union, and the federation of unions, as shown in Chart 1. The organizational complexity of American unionism is the product of the economic, political, social, geographic and public policy forces which have shaped unions in this country since the founding of the first union, the Federal Society of Journeymen Cordwainers (Shoemakers), in Philadelphia in 1792.

The total membership shown for 1983 is the sum of: all affiliates of the AFL-CIO, all affiliates of independent unions, affiliates of state public employee associations, local independent unions; and independent municipal public employee associations. The state public associations are affiliated with either the AACSE (the American Association of Classified School Employees), or the AGE (the Assembly of Governmental Employees). Our counts of organizations are derived from the SOURCEBOOK data base and from organizations filing in 1982 with LMSA.

LOCAL UNIONS

Local unions were the first type of union established and throughout the history of organized labor in the U.S., they have remained its basic structural unit. Indeed, there is reason to believe that a few contemporary locals among the Machinists and Printers have enjoyed a continuous existence since the early 19th century. In contrast to the union movements of Western Europe where local unions, to the extent they exist, play a minor role in the governance of organized labor and the industrial relations systems, locals unions in America are critically important to both. Nearly all union members hold their membership in the local union; only rarely do individuals hold membership directly with a national or international union (membership "at large"). Further underscoring the strength of localism in the American union movement, local unions in the U.S. collectively own slightly more than one-half of total union assets, and thus more than the combined assets of their parent regional, national and international unions. [1]

The total number of locals in the U.S. exceeds that shown in chart 1, since the Labor Management Services Administration (U.S.Department of Labor) cannot, under the Labor-Management Reporting and Disclosure Act of 1959, require registration and reports of many state and local units of public sector employees. For that reason, there are nearly 16 thousand local units of three major public sector organizations, the American Federation of Teachers, the American Federation of State, County and Municipal Employees, and the National Education Association not included in our count. While the AFT claims approximately 2,000 locals, only 917 file with the Department of Labor. For AFSCME, 632 report while the union claims 3,000 subordinate bodies. And for the NEA, only 176 of 12,300 file with Labor. Likewise an unknown number of county, municipal and sub-units of state public employee associations are excluded. Included in the figure of chart 1 are 586 unclassified locals. However, the membership of these organizations is included in the SOURCEBOOK's totals. We would estimate the current total number of locals in the U.S. at nearly 70 thousand.

INTERMEDIATE BODIES

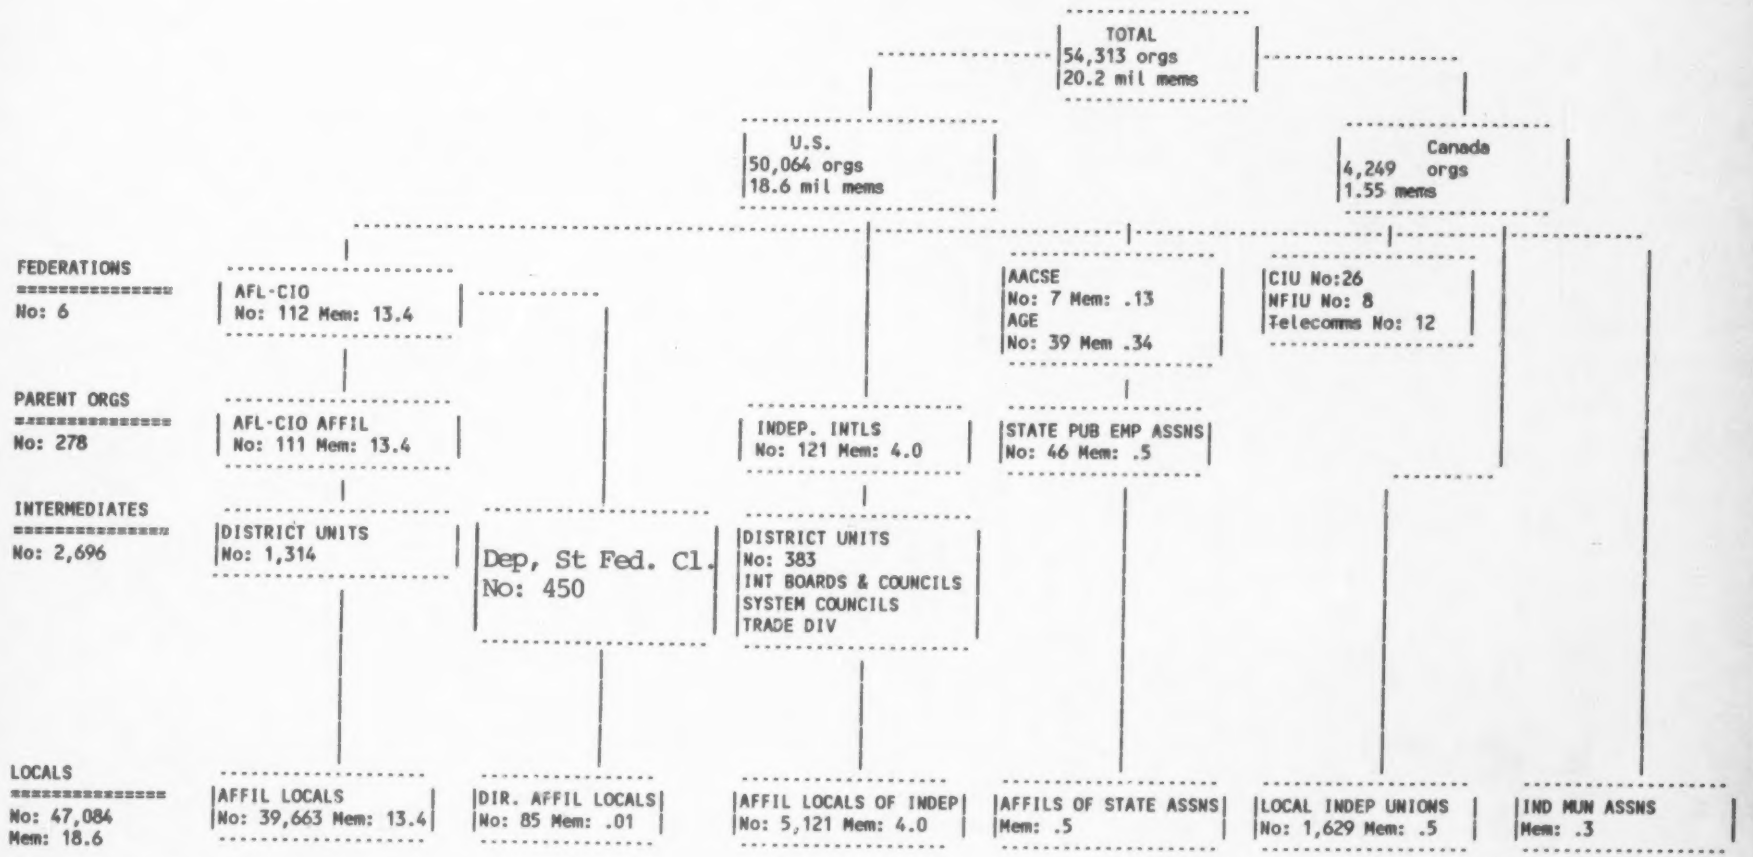
The second layer in the union structure consists of intermediate bodies. These are a heterogeneous category and include the departments of the AFL-CIO and its trades council affiliates; state federations and councils of the Federation; district organizations of national and international unions -- both those affiliated with the AFL-CIO and those which are independent of the Federation. District units set up by the parent nationals and internationals coordinate the activities of their locals and perform a variety of functions, including in some instances, collective bargaining. Political activity and lobbying are primary functions of state federations and councils belonging to the AFL-CIO.

Chart 1 also understates the total number of intermediate unions, which is reported as just under 2700, but the understatement is far smaller than in the case of the local unions. Again, exemption from federal government filing requirements is responsible for the discrepancy. Included are 498 unclassified intermediates, but the 51 state federations and councils are excluded. Some district organizations function as "super-size" locals, notably among the International Association of Machinists and the Amalgamated Clothing and Textile Workers. Financially, intermediate unions collectively account for about 5% of total union assets.[1]

STATE, REGIONAL, NATIONAL AND INTERNATIONAL ORGANIZATIONS

The third structural element is composed of the state, regional, national and international unions and associations. We shall on occasion refer to this group as parent or headquarter unions. State public employee associations exemplify what we mean by state-wide organizations; the Southern Labor Union illustrates the category of regional unions; a national union such as the American Federation of Government Employees has no members outside the U.S., while an international, such as the Teamsters, does, principally in Canada. Parent or headquarter unions are responsible for shaping policy and exercising authority over their subordinate affiliates, particularly with regard to collective bargaining. Our count includes Municipal Public Employee Associations and Local Independent Unions as single entities. Thus, there are 276 regional, national and international unions, plus the two local groups treated as separate entities. Each is listed in the Directory section. These parent organizations are the dominant form of labor organization in the structure of American unions and have historically accounted for about 45 percent of union assets.[1]

Chart 1 Union Structure - 1983



NOTE: membership is in millions

FEDERATIONS

The final element of organized labor in the U.S. is the federation. The dominant federation of unions is, of course, the American Federation of Labor and Congress of Industrial Organizations. The AFL-CIO is the result of the merger of the AFL and the CIO in December 1955. Its primary functions are educational, political and lobbying activities, and acting as spokesman for its affiliates who form the bulk of organized labor. The combined membership of the 111 organizations that comprise the AFL-CIO, as well as the 85 directly affiliated local unions, was just over 13.4 million in 1983. This count includes the Actors and Artistes of America as well as its affiliates as separate organizations, all of which are reported individually and listed alphabetically in the directory section. Some in the performing arts are members of more than one union; hence, there is some double counting of membership, but since the total is small, the overall effect is minimal.

The income of the AFL-CIO in 1982 exceeded $41 million and after accounting for expenses, it's net income was $1.6 million. The Federation's net assets in 1982 were over $27 million (these figures refer to the AFL-CIO, not the consolidated total of its component internationals, departments and councils).

The backbone of the AFL-CIO is its affiliated national and international unions. They are the primary source of its revenue, the per capita tax received from affiliated unions for each member. However, few affiliates, if any, actually pay on their full membership to the Federation, a matter of continuing friction between the Federation and its affiliates. For this reason, membership figures based on the AFL-CIO'S membership reports typically understate and seldom reflect actual membership developments among affiliates.

Between biennial conventions, the governance of the Federation is vested in its president and secretary-treasurer, and the executive council. The council consists of the two executive officers and 33 vice-presidents, most of whom are presidents of affiliated national and international unions. Another body, the general board, which consists of the executive council and principal officer of each affiliated national and international, meets upon call of the Federation president or executive council.

Other important units of the AFL-CIO are its departments and state federations. The departments look after the particular trade or industrial interests of affiliates. For example, the oldest, the Building and Construction Trades Department, actively promotes the objectives of those AFL-CIO affiliates which have members in the building and construction industry. National and international unions join one or more departments of the AFL-CIO to further their members' particular trade or industrial interests. To do so they pay a per capita tax to the department in addition to that paid to the AFL-CIO itself.

State federations of the AFL-CIO are active in political and lobbying efforts within the various states, functioning much like the Federation itself. Within each state local union affiliates of nationals and internationals belonging to the national AFL-CIO are expected to join the state AFL-CIO. Again, the practice diverges from reality and not all local unions eligible actually affiliate with their respective state federations.

There are five other federations in addition to the AFL-CIO, two in the public and three in the private sector. They are the American Association of Classified School Employees (AACSE), the Assembly of Governmental Employees (AGE), the Congress of Independent Unions, the National Federation of Independent Unions, and until recently, the Telecommunications Union, which has apparently evolved into a national union.

NUMBER OF ORGANIZATIONS

The number of labor organizations in the United States has been declining since the Department of Labor began registering unions in 1959-60, particularly those in the private sector. Obscuring the decline was the transformation of so many public employee and professional associations into de facto unions coincident with the rise of public sector unions in the 1960's. The leading example of the transformation is the National Education Association. Currently, it is the second largest labor organization in the country, second only to the Teamsters. The addition of public sector associations added significantly to the number of labor organizations and, of course, to total membership, obscuring for many years, the declining fortunes of private sector unionism.

FINANCIAL FLOWS

The flows of membership payments essentially reflect the structure shown in Chart 1 as well. Membership funds typically go from the local to intermediate unions and to the parent national or international to which they belong. If the parent organization is affiliated with the AFL-CIO, it pays affiliation fees to the Federation. If it also belongs to one of the Departments of the AFL-CIO, the national or international pays fees to that unit as well. Some internationals are affiliates of the Canadian Labour Congress (not shown) and therefore also pay fees to that Federation. Although the typical direction of membership payments is from the local "upward" to the international, a few unions reverse the process. The United Mine Workers, the United Steelworkers and the Communication Workers collect dues at the national headquarters and remit a share to their subordinate units. The Steelworkers' procedures were set when they were an Organizing Committee under the leadership of former Mine Worker leaders, in particular Philip Murray. The Air Line Pilots also collect members' dues at the headquarter level, but do not apparently remit shares to subordinate affiliates.

Because nearly all union members belong to locals and most membership funds flow from the local up, and because local unions as a group own more assets than their parent organizations, it is clear that local unions are and can be expected to remain basic to the structure of organized labor and to the industrial relations system in this country. Thus, despite historic forces "nationalizing" the union movement in other countries, localism continues to be an enduring characteristic of organized labor in this country.

6 DIRECTORY

The DIRECTORY provides address, membership, officer and salary, and other information for federations, international, national, regional and state labor organizations. The term "labor organizations" includes public and private sector unions and associations (see the Preface for definitions). All are listed alphabetically by affiliation. First come affiliates of the American Federation of Labor and Congress of Industrial Organizations; next, Independent unions; third, affiliates of the American Association of Classified School Employees (AACSE); next, affiliates of the Assembly of Governmental Employees (AGE), and finally, unaffiliated organizations.

Unions which merged or were terminated after July 1983, are retained in the Directory. Thus, included in the listings are the Government Inspectors, Ind. (merged 12/83 with the American Federation of Government Employees, AFL-CIO); the Insurance Workers (merged 7/83 with the Food and Commercial Workers, AFL-CIO); the Graphic Arts, and the Printing and Graphic Communications unions (which merged 7/83 to form the Graphic Communications International Union, AFL-CIO). Organizations which came into existance after July 1983 are not included in the Directory.

All affiliates of the AFL-CIO are included. In our listing there are 111, a number larger than that reported by the Federation itself for reasons explained below. There are 121 Independent unions, 7 affiliates of the American Assembly of Classified School Employees (AACSE) and 39 affiliates of the Assembly of Governmental Employees (AGE). Local independent unions and independent municipal and county associations are treated as entities and included as such in the alphabetic listing of independent unions.

Affiliates of three other federations, the Congress of Independent Unions (CIU), the National Federation of Independent Unions (NFIU) and the Telecommunications Union are not separately listed. For the most part, their affiliates are included within our category of local independent unions; a few are listed individually within the category of Independent unions.

Since the SOURCEBOOK was prepared, the Telecommunications Union has transformed itself from a federation of hitherto local independent telephone unions into a new parent or national union, much in the manner that the bulk of the Bell System local independent unions federated to become the National Federation of Telephone Unions and then the Communications Workers of America in the 1930's and 1940's.

As stated above, the number of organizations listed as affiliated with the AFL-CIO exceeds that reported by the Federation itself. In the "Directory", subordinate unions affiliated with parent organizations chartered by the AFL-CIO are counted and reported separately. A leading example are the eight affiliates of the Actors and Artistes of America (AAA). The AAA itself is a chartered affiliate of the AFL-CIO and therefore each of its subordinate organizations is affiliated with the Federation through the AAA. In our data bank, we identify each organization separately and by its affiliation with the AAA. While each affiliate is analogous to a local union, each functions like a regional or national union, while the AAA itself functions as a mini-federation. In the "Directory", each is listed separately and alphabetically as is the AAA itself.

Such "dual" or secondary affiliations are found among Independent unions as well. Thus, the independent Laundry, Cleaning and Dye House Workers Union (now the Textile Processors), which is affiliated with the Teamsters, is listed separately in the "Directory".

The universe of independent unions was determined by (1) the BLS having listed the organization in any of its directories; and (2) the Labor Management Services Administration having listed the organization as a parent union. A parent union is analogous to a regional, national or international union.

In a few instances, the names of the principal officers has changed since we began the compilation of the "Directory". This is true of several important unions, the Auto Workers, the Steelworkers and the Teamsters. However, we retained the original listings because we also had the salaries and expenses/allowances of those reported in the "Directory". The current officers of these organizations are Owen Bieber,president and Raymond E.Majerus,secretary-treasurer of the Auto Workers; Lynn Williams,president and Edgar Ball, secretary of the United Steelworkers; and Jackie Presser,president of the Teamsters; Ray Schoessling,secretary-treasurer continues in that position with the Teamsters.

7.1 INTRODUCTION

Membership and extent of organization by state and the District of Columbia for selected years are reported in Tables 7.1 and 7.2. New York has had the largest union population of any state throughout the years 1939-1982, except for the year 1980 when California surpassed it. (Tables 7.1 and 7.2). In 1982, the latest year available, New York had 2.6 million members, down from its record high of just under 3 million in 1975. California's peak membership was 2.7 million in 1975. However, California exceeded New York in private sector membership in 1982. (Table 7.5). At the other end of the league are South Dakota, 51st and Vermont 50th in 1982.

In addition to having the largest union population in 1982, New York was also the most organized, 35.8% of non-farm employment and Michigan second with a unionization rate of 33.7%. New York made a dramatic switch in the rankings of union density since 1960 because of the rapid and extensive unionization of public employment, especially in New York City. The least unionized states in 1982 were South and North Carolina.

Membership and density in the U.S. is broken down between the private and public sectors in Tables 7.5 and 7.6. Again, New York led with the largest public sector membership in 1982; it ranked behind Rhode Island in the percentage organized. Mississippi and South Carolina ranked lowest in share of public employees organized.

Table 7.7 reports states with right-to-work laws; it does not include Idaho which enacted such a law in 1985, but is currently in abeyance as a result of a state court order. A right-to-work law prohibits collective bargaining contracts from including clauses requiring membership as a condition of employment. Such laws have been permitted since enactment of the Labor Management Relations Act of 1947 (the Taft-Hartley Act).

Table 7.8 lists unions with a membership in excess of 500 thousand by state and territory.

Table 7.9 reports the number of labor organizations distributed by state in 1983. The source of the data is the U.S.Department of Labor, Labor Management Services Administration. These data are the same as those shown in our Chart on the structure of unionism, except that the chart includes organizations not reporting to the Labor Department.

The most populous state in total organizations, local intermediate and national and international unions, is Pennsylvania with over 4,000 and Alaska the least 116.

The financial distribution by state differs from the financial reports in section 4 of the SOURCEBOOK. The state coverage in this section is much broader, including all types of organizations -- locals, intermediates, and nationals and internationals. In section 4 coverage is limited to national and international (parent) unions, due to difficulties with the data, which are magnified by the level of detail shown in section 4.

In terms of wealth, the District of Columbia leads all the states in total assets because so many national and international unions are headquartered there. Of consolidated union assets of $6.3 billion in 1982, unions headquartered in Washington, D.C. held $1.7 billion. Among the states, New York was first with $806 million with Michigan next with $791 million. Vermont ranked lowest with $1.7 million. The combined amount of total assets for the country as a whole is a record.

Regional groupings of membership and density for private, public and the total are reported in Tables 7.11 and 7.12 for 1975 and 1982. The Middle Atlantic states -- New York, New Jersey and Pennsylvania -- ranked first in total and public sector membership in 1982, while The East North Central Region -- Ohio, Indiana, Illinois, and Michigan -- were the largest in terms of private sector membership in 1982 and in total and private sector membership in 1975. In terms of density, the Middle Atlantic region was first in both 75 and 82 for overall density, while the New England region led in public sector density in both 1975 and 1982, and the East North Central led in private sector in 1975 and shared first place with the Middle Atlantic region in 1982.

Figures on the membership and percentage of the labor force organized in eight countries in Western Europe and Japan are reported in Tables 7.15 and 7.16. All countries for which data was available, exceed the extent of organization of the labor market in the U.S.. However, the most striking finding is that, like the U.S., the percentage organized has been dropping in each of them and the most recent membership totals are below the peak in every country except Japan, Sweden and Denmark. In the U.K.,membership and density peaked in 1979; in West Germany the peak membership came in 1981 and peak density in 1979; in France membership topped out in 1976 and density in 1970; Italy's peak membership was in 1980 and peak density in 1978; Japan's membership in 1983 is also its peak, but the percentage organized has slipped steadily through the 'seventies.

7.2 METHODS AND COVERAGE

As with the membership figures in section 3, the source of most of the state distributions are the financial reports of unions filed under LMRDA with the U.S. Department of Labor. These were supplemented for some public sector unions which either were under-represented or did not file at all with the Labor Department. Included in this group were the National Educations Association, the American Federation of State, County and Municipal Employees, and the American Federation of Teachers.

The distribution of membership by state was computed by cumulating for each parent organization, the state by state total of dues receipts or per capita payments received by them from their local unions. These state totals of receipts for an organization were divided into the grand total, yielding a state share, which was then applied to total membership to produce the state by state membership for each union. This in turn was totalled to produce the state membership figures. Due to rounding, the detail may not add to the total shown for the U.S. Distributions for 1939, 1953 and 1960 were derived by Troy in essentially the same fashion (for 1939 and 1953, Distribution of Union Membership Among the States, 1939-1953, adjusted to the SOURCEBOOK's revised totals, 1960 is from previously unpublished data).

International membership figures came from Professors George S. Bain and Robert Price (Profiles of Union Growth, Oxford: Basil Blackwell, 1980), Dr. Jelle Visser ("Dimensions of Union Growth in Postwar Western Europe", EUI Working Paper No. 89, Feb. 1984), and the Japan Institute of Labor (Labor Unions and Labor-Management Relations, Japanese Industrial Relations Series 2, Tokyo, 1983). Note that the density measures use total employment and are thus only roughly comparable to the U.S. figures derived from non-agricultural employment.

APPENDICES

The three appendices contain aggregate historical series from 1897-1983, total and U.S. membership for the sixty largest organizations (based on 1983 Membership) for the same period, and a listing (universe) and summary of all organizations in the data base underlying th SOURCEBOOK. Unpublished membership data for 1897-1983 for each of the organizations listed exists as well.

NOTES

Appendix A. -- denotes unavailable or missing data; AGE is the Assembly of Governmental Employees; AACSE is the American Association of Classified School Employees.

Appendix B. . denotes unavilable or missing data; TOT, US, CA are total membership, U.S. component of the total, and the Canadian component respectively; AFF is the affiliation code: 0 is independent, 1 is AFL, 2 CIO, 3 AFL-CIO, 4 other, 5 AGE, 6 AACSE; the peak year is the year of highest membership.

Appendix C. The type of organizations is either U (union) or A (association); the start year is the year for which we first record membership for the organization; Affil indicates affiliation status as of 1983 for active organizations: AFL-CIO, IND (independent), AGE, AACSE; for terminated organizations, no affilitation is shown; Fed, State, PO and Educ indicate whether the organization is in any of these sectors, 1 denoting yes. Note that the classification of organizations as active or inactive is as of 1984, while 1983 membership is shown. Hence some inactive organizations show 1983 membership.

Into the 21st century: The development of social security

A report to the Director-General of the International Labour Office on the response of the social security system in industrialised countries to economic and social change

This report by ten eminent independent experts (Pierre Laroque (France), Chairman; Brian Abel-Smith (United Kingdom), Reporter; Ewa Borowczyk (Poland); Wilbur J. Cohen (United States); Jérôme Dejardin (Belgium); John Osborne (Canada); António da Silva Leal (Portugal); Adam Trior (Denmark); Gérard M. J. Veldkamp (Netherlands); and Sir Owen Woodhouse (New Zealand)) was commissioned by the Director-General of the ILO to examine the arguments concerning the current role of social security and the scope for its future development. It sets out a coherent philosophy for the development of social security over the next 20 years and beyond.

The experts argue that the current "crisis" in social security is a symptom rather than a cause of the present economic recession and that the cure must be found in wider economic policy rather than in any radical surgery aimed at the welfare State; and they show that many of the solutions offered to current problems are far from being as viable as their proponents would suggest.

Adaptations and extensions of social security are suggested to provide for new life-styles, to give equal rights to men and women, to make provision for further risks, and to improve the response of social security institutions to the needs of different users.

The report places heavy emphasis on a preventive approach by a whole range of services deploying different skills to help people not only to maintain their working capacity but also to enhance their quality of life. The vanishing of poverty is brought into the forefront among the aims of social security policies.

A remarkable feature of the report is the almost total agreement of the ten experts from ten different countries. Its conclusions and recommendations are bound to be quoted and debated for many years to come.
